

## Baureihe Type ZDA

Zug-/ Druckkraftsensor  
*Tension / Compression Sensor*

Zug- Druckkraftsensoren sind Standard in der Industrie. Üblicherweise werden die Kräfte über Gelenk- oder Gabelköpfe eingeleitet. Wird ihnen genügend Freiheit gegeben, richten die Kraftaufnehmer sich unter Last selbst aus und messen sehr genau.

*Tension and compression sensors are standard for industrial applications. Typically force introduction is done by swivel or fork heads. The force transducers adjust themselves if they have enough space. As a consequence measurement is very accurate.*

Genauigkeit *Accuracy*  
**0,2 %v.E. 0,2% F.S.**
